EDUCATION

FPT University 2018 - 2022

- Software Engineering
- GPA: 3.3 / 4.0

SKILLS

- Reactjs/Nextjs, Angular
- Express, Nestjs
- AI Skills building for Claude, Cursor, Copilot
- Tanstack Ecosystem
- Redux, Zustand, Jotai
- HTML/CSS/JS, SCSS
- Rxjs, NgRx
- Zod, Yup, React Hook Form
- TailwindCSS, Shadcn, Antd, MUI
- SQL, MongoDB, Prisma
- Playwright, Cypress, Jest, Vitest
- English (Fluent)
- Figma Design

ABOUT ME

- Frontend Software Engineer (Full-Stack Capable) | 4+ Years of Experience
- Frontend engineer building scalable web applications for international clients (Japanese, Thai, Australian, US), with experience in offshore workflows and cross-functional collaboration through QA leads and bridge engineers (BrSE).
- Proficient in React, Next.js, and TypeScript across the TanStack ecosystem, with state management (Zustand, Jotai) and validation (React Hook Form, Zod). Backend-capable with Node.js, NestJS, and Express, plus test automation via Playwright-BDD and Cypress.
- Actively building AI-assisted development tooling, including an LLM-driven QA pipeline that converts business specs into executable Playwright-BDD test suites.

WORK EXPERIENCE

- Techvify** 05/2025 - Now
Fullstack Software Engineer
 - Focused on frontend development across React and Next.js for Japanese, Thai, and Australian clients, building scalable UIs end-to-end with reusable data-layer patterns and clean, maintainable architecture.
 - Applied Next.js performance optimization techniques — rendering strategy, code-splitting, and data-fetching efficiency — to improve load times and runtime performance. Backend-capable with NestJS when needed.
 - Developed an AI-assisted QA automation pipeline converting BA specs into Playwright-BDD test suites, reducing test-authoring effort and regression cost during active development.

Projects

Broadcast Program Sales Management System - Japanese client

- An internal enterprise system for a Japanese TV broadcaster to manage the full lifecycle of broadcast program sales — from sales planning and customer contracts, through content delivery and warehouse management, to billing and invoice reconciliation.
- Role: Full-stack Software Engineer, AI life cycle Developer
- Team size: 28
- Tech stacks: Nodejs, Reactjs, Nestjs, TypeORM, PostgreSQL, Tanstack Query, Zod, React Hook Form, Zustand

Volunteer Management System - Japanese client

- A web application that connects organizations and volunteers. Organizations can register and post volunteer opportunities, while users can browse and apply for volunteer activities. The system streamlines volunteer recruitment, application tracking, and participation management in one place.
- Role: Front-end Software Engineer
- Team size: 6
- Tech stacks: Nodejs, Nextjs, AWS Amplify, Cognito, Tanstack Query, Zod, Jotai

Disaster and Special Weather Warning Distribution Testing System - Japanese clients

- A management and testing platform for disaster and weather warning distribution. The system allows administrators to manage warning stations and perform distribution tests to ensure that warning information is correctly delivered to each station.
- Role: Front-end Software Engineer
- Team size: 6
- Techstacks: Reactjs, AWS Amplify, AWS DynamoDB, MUI, Tanstack Query

Applicant Tracking System - Thailand Product

- A recruitment platform including 3 applications for recruiters, admin and talents that enables organizations to efficiently search for, connect with, and manage talents.
- Role: Front-end Software Engineer
- Team size: 6
- Tech stacks: Nodejs, Nestjs, Reactjs/Nextjs, Azure Entra ID, PostgreSQL

● Enlab Software

02/2022 - 01/2025

Fullstack Software Engineer

- Built frontend and full-stack features across enterprise, education, recruitment, and management platforms for Vietnamese, American, and Australian clients, using React, Next.js, and Angular.
- Worked directly with international clients to clarify requirements and propose solutions, with a focus on performance optimization, reusable components, and scalable architecture.
- Led an 8-person team building an internal Cypress E2E automation tool, and organized technical sessions in English and Vietnamese on frontend best practices.

Projects

Enterprise Management Software - Vietnamese Product

- An all-in-one business operations platform designed to help companies manage tasks, automate workflows, and optimize processes across departments.
- Role: Front-end Software Engineer
- Team size: 7
- Techstacks: Angular, Typescript, HTML/SCSS, NgRx, Bootstrap.

Educational Platform - American Outsource

- A multi-application platform that assesses users' abilities to recommend and manage suitable courses based on their skill levels.
- **Role:** Frontend Software Engineer
- **Team Size:** 10-15
- **Tech stacks:** Angular, TypeScript, HTML/SCSS

Automation Testing Software - Internal Project

- A Cypress End-to-End Testing Application
- **Role:** Team Lead
- **Team Size:** 8
- **Tech stacks:** Cypress, Google Workspace App Script

Carer Management System - Australian Product

- A system for distributing and managing caregivers for individuals in need, including the elderly, disabled, and those with special needs.
- **Role:** Fullstack Software Engineer
- **Team Size:** 10
- **Tech stacks:** Node.js/Express, React.js

● **FPT Software**

01/2021 - 04/2021

Intern

- Implement Java tasks in a Japanese logistic project.
- **Evaluation score:** 10/10

SIDE PROJECTS

Personal Blog (In Progress)

- A full-stack, bilingual (EN/VI) portfolio and blog platform built with TanStack Start, deployed on Cloudflare Workers, and developed end-to-end with AI assistance.
- **Role:** Fullstack Software Engineer
- **Team Size:** 1 member
- **Techstacks:** Tanstack Start, Reactjs, Shadcn, PostgreSQL, Zod, Tanstack Query, Tanstack Form, Vitest, Playwright

MealGoGo

- A platform that allows customers to create group food orders from third-party or custom restaurants. Users can also generate and manage phased payment invoices.
- **Role:** Fullstack Engineer
- **Team Size:** 2 members
- **Techstacks:** ReactJS/Next.js, Tailwind/Shadcn, antd, TanStack Query, Zustand, NestJS, Jest
- **Responsibilities:**
 - Designed and implemented the frontend architecture, ensuring scalability and maintainability.
 - Managed project direction by making strategic decisions on technology, design, and feature prioritization.
 - Engaged with users to gather feedback, refine features, and improve overall usability.
